For the past ten years I have been the Systems Librarian working with the campus and district IS (Information Systems) departments to ensure library resources are available to students and faculty to facilitate student learning. Over the years I have worked with the various IS staff on the following:

- Library catalog back-up tapes and system updates when the library system was hosted on the district servers.
- Move from the district hosted server to a cloud server for library catalog.
- Obtain and activate security certificates for library domains.
- Trouble shoot student computers, printer and wi-fi issues.
- Statewide Library Service Platform (LSP) and district Banner integration.
